

- Phenylpropanoid biosynthesis
- cell-cell signaling involved in cell fate commitment
- plant-type cell wall organization or biogenesis
- cell differentiation
- floral organ development
- hydrotropism
- secondary metabolic process
- response to iron ion starvation
- DNA catabolic process
- Pectin degradation
- suberin biosynthetic process
- regulation of trichome morphogenesis
- xylan biosynthetic process
- negative regulation of protein complex assembly
- positive regulation of flavonoid biosynthetic process
- lipid storage
- xylem development
- floral organ abscission
