

- RNA modification
- Photosynthesis
- photosynthesis, light reaction
- cellular response to amino acid stimulus
- detoxification of inorganic compound
- recognition of pollen
- mRNA modification
- Flavone and flavonol biosynthesis
- chloroplast RNA modification
- pectin catabolic process
- response to carbon dioxide
- meiotic mismatch repair
- cytokinin catabolic process
- positive regulation of organ growth
- response to light stimulus
- inositol lipid-mediated signaling
- gibberellin metabolic process
